

## *Extremophiles Where It All Began*

### **Extremophiles Where It All Began**

*Thermus aquaticus* is a species of bacteria that can tolerate high temperatures, one of several thermophilic bacteria that belong to the *Deinococcus-Thermus* group. It is the source of the heat-resistant enzyme Taq DNA polymerase, one of the most important enzymes in molecular biology because of its use in the polymerase chain reaction (PCR) DNA amplification technique.

### **Thermus aquaticus - Wikipedia**

A microorganism, or microbe, is a microscopic organism, which may exist in its single-celled form or in a colony of cells.. The possible existence of unseen microbial life was suspected from ancient times, such as in Jain scriptures from 6th century BC India and the 1st century BC book *On Agriculture* by Marcus Terentius Varro. Microbiology, the scientific study of microorganisms, began with ...
