Soil biology is the study of microbial and faunal activity and ecology in soil. Soil life, soil biota, soil fauna, or edaphon is a collective term that encompasses all organisms that spend a significant portion of their life cycle within a soil profile, or at the soil-litter interface. These organisms include earthworms, nematodes, protozoa, fungi, bacteria, different arthropods, as well as ...

This online course will provide an overview of clean-in-place (CIP) systems including design, integration, and selection of cleaning chemicals. Participants will discuss engineering concepts, principles, and integration of CIP systems, clean-out-of-place (COP) systems, or immersion parts washers.

A field experiment was conducted to examine the microbial populations and microbial biomass carbon under organic and inorganic farming practices in paddy (variety IR-64) fields. The organic fertilizer used was a mixture of farmyard manure, rock phosphate and neem cake, while on the other hand for inorganic fertilizer, a mixture of urea, single super phosphate and muriate of potash was used.

An ecosystem is a community of living organisms in conjunction with the nonliving components of their environment, interacting as a system. These biotic and abiotic components are linked together through nutrient cycles and energy flows. Energy enters the system through photosynthesis and is incorporated into plant tissue. By feeding on plants and on one-another, animals play an important role ...

Civil Engineering. Civil Engineering is the branch of engineering that covers the design, construction, and maintenance of the physical and naturally built environment—most specifically of fixed structures or public works—and takes place in both the public and private sectors. This includes large buildings, roads, bridges, structures, airports, railways, canals, dams, treatment systems ...
