### **Hearing Problems Solutions**

Hearing plays a major role in our quality of life, from our emotional well-being and physical health to our careers and leisure activities. Yet millions of people who have hearing loss let it go untreated, despite research showing links between untreated hearing loss and increased risk of falls, depression, anxiety, hospitalizations and even dementia.

### **Hearing Loss is a Common Problem - How to Improve Hearing**

Hearing aids are the most common treatment for hearing loss. Millions of individuals wear these miniature, custom-fit, digitally programmed and personalized hearing solutions every day. If you rely on hearing aids to keep you hearing clearly at all times, you know how important it is to quickly identify and troubleshoot problems.

### **How to troubleshoot common hearing aid problems**

Hearing loss is the third most common health problem in the U.S, and it can affect the quality of your life and relationships. About 48 million Americans have lost some hearing. Certain conditions, including age, illness, and genetics, may play a role in hearing loss.

### **Symptoms of Hearing Loss & Degree of Hearing Loss**

Most common hearing aid problems can be solved by refitting your ear mold, checking for wax or moisture, inspecting the tubing for blockage or damage, and replacing the battery in your hearing aid. If these solutions don't fix your issue, be sure to contact your audiologist for help—there could be something inside the device that is malfunctioning, and you'll want to get it checked right away!

Minor feedback problems may be corrected by reprogramming your hearing aids. BUT beware of the provider who programs out the higher frequencies often associated with feedback problems. He'll be reducing your feedback BUT also reducing your clarity. This is an unacceptable way to solve a feedback problem.

Sensorineural hearing loss (SNHL) is due to problems of the inner ear, also known as nerve-related hearing loss. Sensorineural hearing loss can occur from head trauma or abrupt changes in air pressure (e.g., airplane descent), which can cause inner ear fluid compartment rupture or leakage, which can be toxic to the inner ear.

### **Types, Causes and Treatments of Hearing Loss - the Basics**

Hearing loss may be gradual or sudden. Hearing loss may be very mild, resulting in minor difficulties with conversation, or as severe as complete deafness. The speed with which hearing loss occurs may give clues as to the cause. If hearing loss is sudden, it may be from trauma, acute inflammation, or a problem with blood circulation.
