Time management series The what, why and how of to-do lists. Developing time management skills is a journey that may begin with this Guide, but needs practice and other guidance along the way.

Creating a to do list - Study Guides and Strategies

There's no const keyword as in other languages, however it is possible to create a Property that has a "getter function" to read the data, but no "setter function" to re-write the data.This essentially protects the identifier from being changed. Here is an alternative implementation using class property: Note that the code is far from easy for a reader wondering about constants.

How do I create a constant in Python? - Stack Overflow

You can create a Facebook account from facebook.com or your Facebook app.

How do I create a Facebook account? | Facebook Help Center ...

Python automatically compiles your script to compiled code, so called byte code, before running it. When a module is imported for the first time, or when the source is more recent than the current compiled file, a .pyc file containing the compiled code will usually be created in the same directory as the .py file.
