### **How Einstein Ruined Physics**

Einstein is considered the world's greatest genius for creating the theory of relativity. How Einstein Ruined Physics explains relativity, how it was discovered, and how it fits into a long history of trying to understand motion and symmetry. The book shows that Einstein's role is badly misunderstood.

How Einstein Ruined Physics however is not just about Einstein the man, but how the world-changing findings in physics over the past century have produced an Einstein cult that continues to impact modern science negatively. In physics, says Schlafly, this has led to wasteful, un-falsifiable "top down" theorizing that often leads nowhere.

How Einstein Ruined Physics. The crucial ideas behind relativity are motion and symmetry, and these are the most basic ideas in all of science. Relativity was the culmination of an ancient quest to understand the motion of the Earth. The story takes us from ancient Greeks like Aristotle, through medieval debates over Copernicus and Galileo,...

New Book Says Einstein Highly-Overrated and Ruined Physics. Einstein is the new Aristotle. Physicists love to ridicule Aristotle for his non-quantitative theory of physics, for his thought experiments, for his unsubstantiated realism, and for his (supposed) attempts to explain the world according to how he thought the world ought to be,...

Einstein is taken into account the world's maximum genius for growing the idea of relativity. How Einstein Ruined Physics explains relativity, the way it was once chanced on, and the way it suits right into a lengthy historical past of attempting to comprehend movement and symmetry.

Re: How Einstein Ruined Physics Einstein's relativity work is a magnificent mathematical garb which fascinates, dazzles and makes people blind to the underlying errors. The theory is like a beggar clothed in purple whom ignorant people take for a king... its exponents are brilliant men but they are metaphysicists rather than scientists.

Einstein began to suffer from ill health in 1950, and eventually died of an aortic aneurysm on 18 April 1955 in Princeton Hospital in New Jersey at the age of 76, having continued to work, both on physics and on his civil rights and political concerns, until the day he died, his search for a "theory of everything" still unrealized.
