Step 1: Identify the parent chain to be the parent name of the molecule. That is, the longest, continuous carbon chain. As you have explored in Preliminary HSC Chemistry, all alkanes end with the term 'ane'. Therefore, you should have 'ane' at the end of your alkane's root-name. NOTE: In the case where there are two equally longest chain carbons, you would choose the one that ...

Queen Mary offers highly regarded training in both theoretical and practical chemistry. You'll develop an advanced scientific understanding of the physical and chemical properties of matter, including the nature of atoms and molecules, their structure and composition, their reactions and the ways they are used in products and materials.

In chemistry, an organic compound is generally any chemical compound that contains carbon. Due to carbon's ability to catenate (form chains with other carbon atoms), millions of organic compounds are known. Study of the properties and synthesis of organic compounds is the discipline known as organic chemistry. For historical reasons, a few classes of carbon-containing compounds (e.g., carbonates ...
